

# Upgrade to NG2

## Oil sensor NG1

You want to use all benefits of model NG2 with your oil sensor NG1? Then let us upgrade your device.

- *EasyCal*  
This new technology guarantees identical behavior with equal calibrations. Hence calibration settings may be exchanged between two NG2 oil sensors without any adjustments.
- *New calibration management* via PC:  
Only transfer the calibration settings you actually need to the oil sensor. This provides the user with a better overview on display even though the demands on diversity and functionality have increased.
- Easy to use *calibration wizard* for creating your own calibrations.
- Data transfer to PC via *Bluetooth* possible.
- Unit  $mg/m^2$  available for measuring small thickness values.
- New menu item to enter *comments* for grouping consecutively taken measurements.
- Firmware *update possible via remote data transmission*, when new future functions are purchased

Take advantage of the benefits individually or as a package :

|  |                        |
|--|------------------------|
| EasyCal technology                       | 2486,00 € <sup>1</sup> |
| NG2 software                             | 1925,00 €              |
| Internal bluetooth module                | 1783,00 €              |
| Package price                            | 5194,00 €              |
| Alternatively: External bluetooth module | 486,00 €               |
