

External Bluetooth Connection

Oilsensor NG1

Your oil sensor NG1 may be connected to a computer via an external Bluetooth interface - after electronic preparation. This interface is an alternative to the RS232 interface (via cable) and allows communication over a greater distance.

For an external connection via Bluetooth the following accessories are available:

Bluetooth USB adapter to be connected to your PC.

Bluetooth RS232 Adapter to be connected to your oilsensor by means of a null modem gender changer .

The adapters are supplied for plug&play: All settings necessary for communication already will have been made. Also at the oilsensor no further settings will be required after one-time preparation at our plant.

Price	486,00 €	for accessories and electronic preparation.
Working distance	about 300m	in an open field
Bluetooth specification	v2.0 + EDR	
No Bluetooth driver required
